ANNEX II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Storebrand USA Plus Legal entity identifier: 529900762LGYZZZ38X73

Environmental and/or social characteristics

What environmental and/or social characteristics are promoted by this financial product?

Storebrand USA Plus integrates ESG aspects (environmental, social and corporate governance issues) into the decisions. These aspects include both ESG risks and limiting climate change. In the Sustainability analysis of the companies, we measure, among other things, financially significant risks regarding environmental, social and corporate governance issues that have a significant impact on the company's financial value. We analyze both ESG risks and SDG opportunities (the UN's global sustainability goals) and weigh these together into a rating.

- Environmental characteristics (e.g., the company's impact on the environment and climate)
- Social characteristics (e.g., human rights, labor rights and equal opportunities)
- Good governance practices (e.g., shareholders rights, issues related to remuneration of executives and measures against corruption).

As such, The Fund seeks to invest in:

- Companies with a low carbon footprint;
- Companies with a high Storebrand Sustainability ESG score,
- ESG Solution companies, (i.e. companies that significantly contribute to sustainable development without causing substantial harm to environment or society. Examples are companies whose key business is centered around investment themes like renewable energy, technologies for sustainable city development, circular economy and empowerment etc.),
- The fund selects companies with a share of green revenue (that is, companies that intend in the future to be in line with the Paris Agreement, in accordance with the Science Based Targets Initiative,
- The Fund promotes environmental characteristics by actively investing in companies that contribute to the mitigation of climate change and/or which may have other positive impacts on the environment or society and by excluding certain companies which have a negative impact on the environment and/or society. More particularly, the Fund promotes a transition to a world with low carbon dioxide emissions (greenhouse gases) by excluding entities which derive a large part of their net sales from the production and/or distribution of fossil fuels and entities with large fossil fuel reserves,
- The Fund also promotes social characteristics by excluding companies that may have a
 negative impact on society and that violate international norms (such as companies with
 business operations linked to banned weapons, nuclear weapons, weapons and war
 materials, alcohol, tobacco, cannabis, pornography and commercial gambling, as well as by
 excluding companies that violate international norms and conventions related to human
 rights, labor law or combating corruption and bribery),
- The fund promotes good governance practices by fighting corruption and economic crime through advocacy work with active owership and dialogues.
- What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?
 - The objective is for the fund to have a higher sustainability level (Storebrand's own sustainability rating 1-10) than its benchmark index
 - The objective is for the fund to have lower carbon dioxide emissions than its benchmark
 - Share of Green revenue
 - PAI 4. Exposure to companies active in the fossil fuel sector
 - PAI 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
 - PAI 14. Exposure to controversial weapons (antipersonnel mines, cluster munitions, chemical weapons and biological weapons)
 - Revenues from business activities related to the production and distribution of nuclear weapons, weapons, alcohol, tobacco, cannabis, pornography, commercial gambling and fossil fuels
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives. The Fund's environmentally sustainable investments may contribute to one or more of the environmental objectives of the Taxonomy Regulation (EU) 2020/852 (the "EU Taxonomy"), such as but not limited to climate change mitigation and climate change adaptation.

The fund's share of sustainable investments is made in companies assessed to contribute to an environmental or social goal according to the United Nations' Global Sustainable Development Goals and the Paris Agreement, while ensuring that a sustainable investment does not cause significant harm to any other environmental or social goal and must adhere to corporate governance practices. The sustainable investments of the fund consist of companies whose products, services, or business models contribute positively to sustainable development. These may include companies in themes such as renewable energy, sustainable urban development, circular economy, sustainable consumption, and equal opportunities. It can also involve companies with a share of green revenue in accordance with FTSE Green Revenue. The distribution between investments contributing to either social or environmental goals may vary depending on the composition of the fund over time.

Sustainability

indicators measure how the environmental or social characteristics promoted by the financial product are attained. The Fund seeks to achieve its sustainable investment objective by investing in companies that:

- Reduces climate risk by not investing in the fossil fuel value chain
- Companies with high Storebrand Sustainability ESG score. The Storebrand Sustainability ESG Score developd by the Investment manager is a proprietary ESG rating system to analyse over 4,000 companies, using qualitative and quantitative assessment of sustainability risks and opportunities.
- Allocates a part of the portfolio to climate solutions companies, such as renewable energy, green transport, recycling, water and energy efficiency. (as defined below).
- Promotes a transition to a world with low carbon dioxide emissions (greenhouse gases) by excluding entities which derive a large part of their net sales from the production and/or distribution of fossil fuels and entities with large fossil fuel reserves.
- As part of the objective of making sustainable investments in the areas specified above, the Fund also applies an exclusion strategy. The Fund excludes investments in companies with business activities associated with fossil fuels and in companies that violate international norms and conventions related to environmental issues.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment т objective?

For all investments in the fund, at the time of investment and on an ongoing basis, checks are I carried out against the fund company's exclusion criteria to ensure that no companies are I involved in activities which the fund company considers incompatible with the fund's focus. The process to exclude a company is very extensive. It contains both internal and external 1 data and assessments are carried out by our Risk & Ownership team. The excluded н companies are removed from the fund's investment universe and a company can be excluded on several criteria. The team follows a methodology that is based on a screening process where the investments exposure and impact on several sustainability indicators are measured. T

The result of this screening will give an indication of whether the investment is exposed to adverse impacts, based on the indicators we measure. If any of our investments are exposed to impacts that we concider to be significant, then the investment is concidered to harm our environmental or social objectives and the financial instrument will be excluded from the Fund's investment universe.

All investments are subject to a screening process to assess whether the investee is negatively I affecting environmental or social objectives related to:

- Significant damage to the environment or climate, T.
 - Significant harm to workers, communities and society, such as severe and •
 - systematical violations of international law and human rights,
 - Significant damage through gross corruption and financial crime,
 - Production and distribution of controversial weapons.
 - Production and distribution of tobacco and cannabis.
 - Production and distribution of alcohol.

T

- Production and distribution of pornography,
- · Production and distribution of commercial gaming activities,
- Т · Production and distribution of coal, oil and gas, as well as large fossil reserves, Т
 - Production and distribution of oil sands,
 - Unsustainable production of palm oil,
- Companies that actively lobby against the goals of the Paris Agreement,
 - . Countries that lack basic institutions to prevent corruption, meet basic laying social and political rights and contributing to maintaining international peace and security.

I - How have the indicators for adverse impacts on sustainability factors been taken into account?

The Investment Manager takes into account the indicators for adverse impacts on sustainability factors in all of the Investment Manager's investment decisions on an ongoing basis. The Fund will only invests in companies that have gone through the Management Company's own sustainability analysis. The Fund's viable investments are made in companies whose products and services contribute to achieving a positive impact and a more sustainable development.

Principal adverse

impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social

and employee matters, respect for human rights, anti- corruption and anti- bribery matters.

The DNSH-test consists of an exclusionary screening of companies which exceed set thresholds. The exclusionary screening consists of three components: 1) norm-based exclusion screening, 2) product-based exclusion screening and 3) sovereign bond screening.

Companies that are non-compliant with the below are not eligible as sustainable investments.

All of the underlying securities are assessed for adverse impacts as part of the DNSHprocess in the following manner:

1) For several of the adverse impact indicators the set thresholds defines what is considered as significant harm to environmental or social objectives, based on the indicators measured by the Investment Manager. An investment that exceeds the defined thresholds is excluded from the Fund's investment universe.

For indicators without a defined threshold, the dedicated sustainability team is responsible to assess each entity on an individual basis, where data from an external data provider is used to assess whether an entity is involved with a breach or in risk of breaching one of these indicators. In this assessment conditions such as severity, scope of harm, and risk of recurrence is analyzed using a predefined scoring table to ensure consistency in the evaluation process. The final decision to exclude the investment from Sub-Fund's investment universe is however qualitative and based on the evaluation of the dedicated sustainability team and the assessment of the issue by the Investment Manager's Sustainable Investment Committee.

2) Adverse impacts indicators are accounted for, and for all of the underlying securities based on the data availability, coverage and quality which allows for setting measurable or quantifiable thresholds, or where there is sufficient information to make a qualitative assessment of adverse impacts. As the data quality and availability improves, the Investment Manager will be considering a range of methods to better account for these and mitigate adverse impact.

The Fund's screening and exclusion process described above covers several of the indicators for adverse impacts on sustainability factors listed in Annex I. In the DNSH-process, The Fund currently considers the following indicators from Table 1 of Annex I:

PAI 4 Exposure to companies active in the fossil fuel sector

- PAI 7 Activities negatively affecting biodiversity sensitive areas
- PAI 8 Emissions to water
- PAI 9 Hazardous waste
- PAI 10 Violations of UNGC principles and OECD guidelines
- PAI 14 Exposure to controversial weapons

PAI 16 Sovereigns: Investee countries subject to social violations

In addition the Fund considers the following indicator from Table 2 of Annex 1: PAI 15 Deforestation

The Fund's investment universe is monitored daily for potential breaches of Storebrand Sustainable Investment Policy and screened quarterly to assess if companies are in breach of this sustainability policy.

Storebrand's Investment Control and Analytics (ICA) department is responsible for verifying that management complies with individual mandates as well as internal and external laws and regulations. As part of the daily compliance controls, all trades and positions are controlled for breaches on the Group Sustainability Policy, including the above-mentioned exclusion criteria's.

- How are the sustainable investments aligned with the OECD Guidelines for
 Multinational Enterprises and the UN Guiding Principles on Business and Human
 Rights?

The Investment Manager aims to ensure that all investee companies follow the OECD
 Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and
 Human Rights and the ILO conventions. The process for this is to screen all investments in

the Fund's investment universe by using data and research from an external data

- provider. This screening is intended to assess and screen how companies adhere to these
- standards, and if in breach of them, how they respond to incidents and implement
- changes. The Fund will not invest in entities defined as non-compliant, based on this
- screening. Once an entity has been defined as non-compliant, the entity is excluded from
- the Fund's investment universe, and the entity is no longer investable until the status has
- changed. This list of excluded entities are updated on a quarterly basis.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomyaligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

No

Т

🛛 Yes

The Fund's screening and exclusion process described above cover several of the principal adverse impacts (the "PAIs") on sustainability factors.

The Investement Manager has been working to reduce adverse impact in its portfolios since the turn of the century and it has identified the following as main adverse sustainability impact categories that apply to all equity and debt portfolios including the Fund:

- Adverse impacts affecting the environment and climate such as: severe environmental damage; Green House Gas emissions; biodiversity loss and deforestation
- Adverse impact affecting workers, communities, and society such as: violations of basic workers' rights; forced labor; gender/diversity discrimination or indigenous rights violations
- Adverse impact in connection with gross corruption and money laundering
- Adverse impact in connection with controversial weapons (landmines, cluster munitions and nuclear weapons)
- Adverse impact in connection with tobacco products
- Fossil fuels (coal, oil, gas), oil sands, alcohol, commercial gambling, cannabis, pornography and weapons.

These products are associated with significant risks and negative consequences for society, the environment or health.

The Investment Manager has also identified some products as adverse impacts that it aims to avoid such as coal or oil sands and others such as alcohol, gambling, and conventional weapons. These products are associated with significant risks and liabilities to society, the environment or health.

The Investment Manager's methodology is to identify PAI laggards (red), PAI intermediate performers (yellow) and PAI leaders (green) so that risk can be avoided, and more capital can be allocated to more sustainable companies and solution companies.

RED: Those companies identified as PAI laggards will be further analyzed by the Risk and Active Ownership team and may result in exclusion depending on the risk and severity of

the negative impact identified and the total cumulative negative impact identified across all PAI indicators.

YELLOW: PAI intermediate performers will also be further analyzed with the aim to mitigate adverse impact through engagement. Please see 3.3 Addressing of PAIs and Mitigation.

GREEN: In addition, the analyzed PAI data will be further integrated in financial decisions with the aim to allocate more capital to PAI leaders, and thus lift the sustainability value of the Fund. Please see 3.3 Addressing PAIs and Mitigation.

Information on principal adverse impacts conisdered by the Fund will be available in the fund's annual report.

What investment strategy does this financial product follow?

We integrate sustainability into investment decisions through our processes and practies with three methods:

Exclusion

The Fund does not invest in companies involved in products and services that are at high risk of having an adverse negative impact on the outside world and society and to reduce the risk in the Fund. The Fund applies sustainability requirements in the form of an exclusion strategy, which means that the Fund refrains from investing in companies that violate international norms and conventions. It includes human rights, labour law and international law, corruption and economic crime, serious climate and environmental damage, deforestation and controversial weapons (anti-personnel mines, cluster munitions, chemical and biological weapons). The Fund also excludes companies with operations linked to tobacco, weapons, alcohol, gambling, pornography, cannabis, fossil fuels (coal, oil, gas), oil sands and companies with large fossil reserves. The exclusions that result from this are binding on the Fund company in the management of the Fund.

Inclusion

The Fund has specific and stated criteria for selecting companies based on environmental, social and corporate governance issues. Each individual company that is selected for the Fund, and continuously after the acquisition of a security, is assessed and graded based on our fundamental sustainability analysis where the companies are classified based on many different sustainability indicators, have comprehensive systems for managing ESG risks and contribute positively to the UN's Global Sustainability Goals. In the sustainability analysis, both ESG risks and SDG opportunities are analysed and combined into a rating. 50 percent of the rating is based on the ESG risks and 50 percent on the SDG opportunities. The SDG rating measures opportunities linked to the UN's Global Sustainability Goals and the Paris Agreement with a focus on products and services that help achieve the SDGs. Equality makes up 10 percentage points of the SDG grade.

The fund also actively selects companies with a low carbon footprint, companies with a high sustainability rating, solution companies (by solution companies, we mean companies that provide products and services thatservices that contribute to solutions to climate and sustainability challenges) and companies with a high proportion of greenrevenue (i.e. companies that intend to be in line with the Paris Agreement in the future, in accordance with the accordance with the Science Based Targets Initiative).

Active ownership

Our specialists in sustainable investments and corporate governance together with our Investment Manager have ongoing dialogue and meetings with the companies, by telephone, email or personal meetings. This takes place both reactively if a controversial event has occurred and proactively within our prioritized areas of influence. In the case of common issues, we join forces with other large owners through our involvement in, among other things, PRI (UN Principles for Responsible Investment) to gain greater influence. We generally vote at general meetings where we have a significant ownership, on matters deemed to be in the interests of the shareholders and on matters that are not in line with our ownership governance policy. The Fund promotes the transition to a world with low carbon dioxide emissions (greenhouse gases) by excluding companies with activities linked to fossil fuels, with large fossil reserves and companies that violate international norms and conventions related to environmental issues.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance. The fund promotes a transition to a low-carbon (greenhouse gas) world by excluding companies with activities linked to fossil fuels, have large fossil fuel reserves and companies that that violate international norms and conventions related to environmental issues.

• What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

For all investments in the fund, at the time of investment and on an ongoing basis, checks are carried out against the fund company's exclusion criteria to ensure that no companies violate Storebrand Fonder's policy for sustainable investments and that the fund complies with the environmental/social characteristics the fund promotes and the proportion of sustainable investments that the fund promises to make.

The Fund actively selects companies with a low carbon footprint, companies with a high sustainability rating and solution companies, by solution companies it means companies that provide products and services that contribute to solutions to the world's climate and sustainability challenges (examples are companies whose key business is centered around investment themes like renewable energy, technologies for sustainable city development, circular economy and empowerment etc.). The Fund emphasizes companies with a high share of green revenue, as well as companies that intend in the future to be in line with the Paris Agreement, in accordance with the Science Based Targets Initiative.

The fund promotes a transition to a world with low carbon dioxide emissions (greenhouse gases) by excluding companies whose turnover to more than 5 percent comes from the production and/or distribution of fossil fuels, companies with large fossil reserves and companies that violate international norms and conventions linked to serious climate or environmental damage and deforestation. The fund promotes social aspects by opting out of investments in companies with activities linked to prohibited weapons, nuclear weapons, weapons and military equipment, alcohol, tobacco, cannabis, pornography and commercial gaming activities as well as by opting out of companies that violate international norms and conventions related to human rights, labor law, corruption and financial crime.

For product-based exclusion criteria, we use a limit of 5 percent of the companies' revenues for the companies to for the companies to be excluded. This is according to the recommendations of The Swedish Investment Fund Association, which has determined that up to five percent of the turnover in the company in which one invests can refer to the unwanted activity, when a fund company emphasizes that investments in certain activities are selected out. In most cases, the income is from these industries 0 percent or close to 0 percent, but they can therefore amount to a maximum of 5 percent. For controversial weapons, it is always 0 percent that applies to both production and distribution. For exact limits see the fund company's website.

For norm-based criteria, an assessment of the degree of seriousness, the risk of repetition and the handling of the case by company management is made, among other things. The norm-based incidents are analyzed and presented anonymously to an investment committee that decides on possible exclusion.

• What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Fund does not have a committed minimum rate to reduce the scope of investments, but sustainability requirements provide for the Fund's exclusion of potential investments. The exclusions strategy reduces the Fund's potential investment universe by about 15-20 percent but will vary over time.

• What is the policy to assess good governance practices of the investee companies? The Fund has implemented a norm-based exclusion screening process to assess whether investee companies follow good governance practises. The purpose of this screening is to exclude all companies that do not follow what the Investment Manager considers to be good governance practices from the Fund's investment universe.

Good governance practices include sound management

structures, employee relations, remuneration

of staff and tax compliance.

The Fund has defined criteria for what is concidered as good governance practices. In order to assess whether a company follow this criteria, the Fund uses several different governance indicators to assess whether any investee company follows what the Investment Manager has defined as good governance practices or not.

In the assessment specific indicators are considerd on:

- · board and management quality and integrity,
- board structure,
- ownership and shareholder rights,
- remuneration packages,
- auditing and financial reporting,
- stakeholder governance.

The list is however not inclusive of all indicators that the Investment Manager uses to measure good governance practices, and a full list can be found on the Company's website. The assessment process consists of two steps:

1) A data-driven analysis where the Investment Manager's data providers provide a score which gives an indication on how the investee companies performs in relation to good governance practices, measured by the specific indicators. The Fund will not invest in any company assessed to be non-compliant with the prinicples of good governance.

2) Internal qualitative assessment where an internal team assesses the seriousness of the breach that either has or may take place. This assessment is based on a qualitative assessment where factors such as geography, sector and the individual incident are considered. The Fund will not exclude companies based on operations in specific countries but will assess the manner in which they run their business in the countries where they operate. The Investment Manager screens all its investments in a a norm-based exclusion assessment, which means it will not invest if the investee companies have contributed or are involved with violations of its criteria for good governance practices.

What is the asset allocation planned for this financial product?

The fund will allocate at least 30 percent to sustainable investments, but the intention is for the level to be around 35percent. The remaining portion of the investments aligns with the fund's promotion of environmental and/or social characteristics, along with a smaller portion in cash for liquidity management.

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies

- capital expenditure

(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- operational expenditure (OpEx)

#1

Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2

Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling

activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional

activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy. • How does the use of derivatives attain the environmental or social characteristics promoted by the financial product? Not applicable.

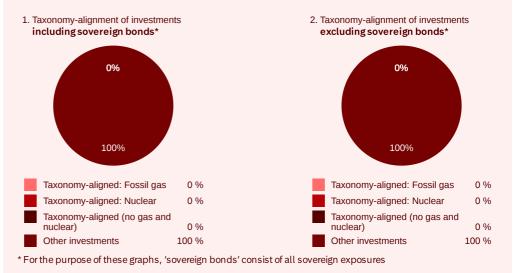

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

Currently, the companies have not begun to fully disclose the extent to which their activities are aligned with the EU Taxonomy, and there are no technical standards for all environmental objectives. Consequently, the Management company has chosen at the present time to not state a minimum level with regard to alignment with the taxonomy and therefore reports 0 percent.

• Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

• What is the minimum share of investments in transitional and enabling activities? Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The fund aims to have 30 percent in sustainable investments, which means that the fund can invest in sustainable investments with either environmental or social objectives as long as the combined minimum share is always at least 30 percent.

What is the minimum share of socially sustainable investments?

The Fund aims to have at least 30% in sustainable investments. The fund currently has no split between environmentally and socially sustainable investments.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The Fund may hold cash for liquidity management purposes as "Other" investments. No minimum environmental or social safeguards are applied.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments' alignment with the promoted characteristics. It is also possible that the Fund may hold investments that are not in line with the promoted characteristics, for instance as a result of a merger or other corporate action. In such case, the Investment Manager will generally seek to dispose of these investments as soon as possible in the interests of Shareholders.

Where can I find more product specific information online? More product-specific information can be found on the website:

www.storebrandfonder.se/fonder/in-english
